z, M*, SFR and DM_host against inclination within tertiles of each quantity

z vs i, binned by z

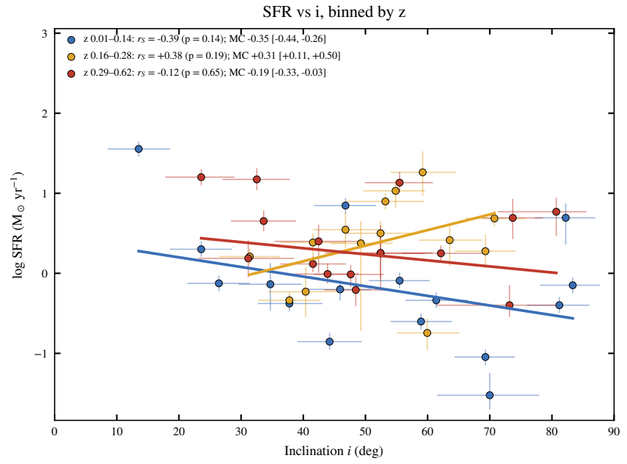

all 55: r_S = -0.02 (p = 0.86); partial r: binned on the y quantity
pooled within tertiles: r = +0.09 (p = 0.54); tertiles agree: p = 0.25
through the errors (MC median [16, 84]%): all -0.04 [-0.09, +0.01]

M* vs i, binned by z

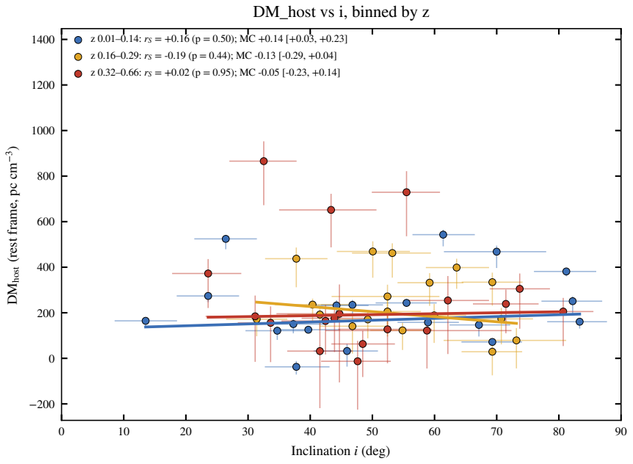

all 51: r_S = +0.14 (p = 0.31); partial r | z = +0.11 (p = 0.21)
pooled within tertiles: r = +0.15 (p = 0.33); tertiles agree: p = 0.95
through the errors (MC median [16, 84]%): all +0.13 [+0.07, +0.19]; partial r +0.09 [+0.06, +0.14]

SFR vs i, binned by z

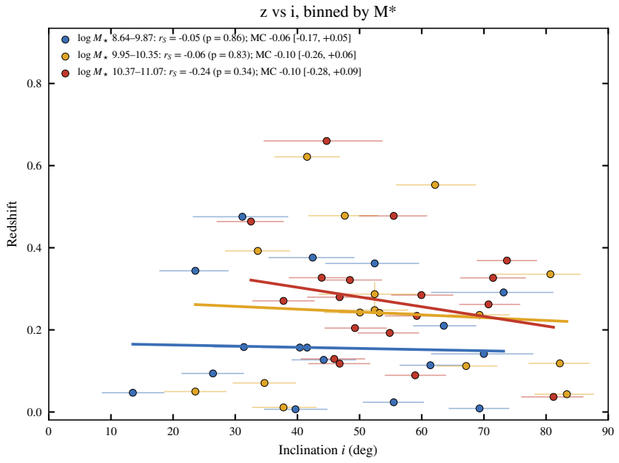

all 46: r_S = -0.12 (p = 0.42); partial r | z = -0.06 (p = 0.56)
pooled within tertiles: r = -0.07 (p = 0.68); tertiles agree: p = 0.16
through the errors (MC median [16, 84]%): all -0.14 [-0.20, -0.08]; partial r -0.09 [-0.13, -0.05]

DM_host vs i, binned by z

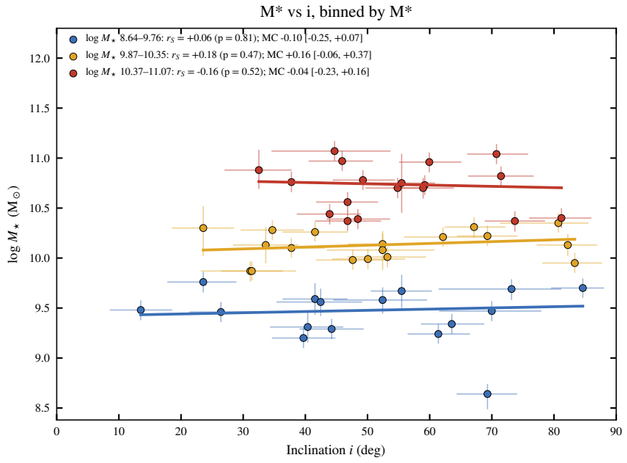

all 55: r_S = +0.06 (p = 0.64); partial r | z = +0.05 (p = 0.64)
pooled within tertiles: r = -0.00 (p = 0.99); tertiles agree: p = 0.62
through the errors (MC median [16, 84]%): all +0.02 [-0.06, +0.11]; partial r +0.01 [-0.04, +0.07]

z vs i, binned by M*

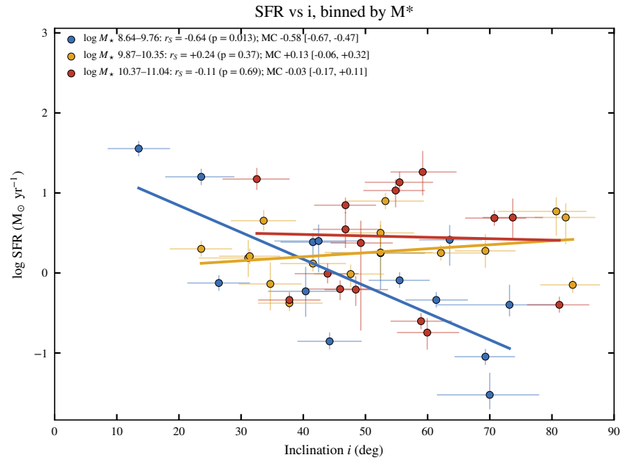

all 51: r_S = -0.04 (p = 0.76); partial r | log $M_\star$ = -0.05 (p = 0.61)
pooled within tertiles: r = -0.12 (p = 0.45); tertiles agree: p = 0.85
through the errors (MC median [16, 84]%): all -0.05 [-0.10, -0.01]; partial r -0.05 [-0.09, -0.02]

M* vs i, binned by M*

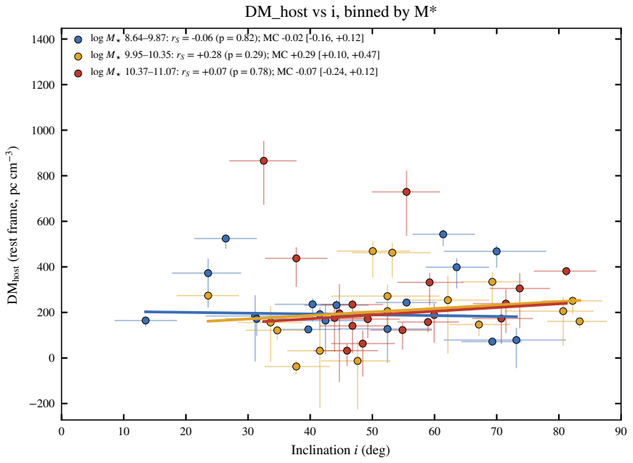

all 52: r_S = +0.11 (p = 0.43); partial r: binned on the y quantity
pooled within tertiles: r = +0.03 (p = 0.86); tertiles agree: p = 0.64
through the errors (MC median [16, 84]%): all +0.10 [+0.04, +0.16]

SFR vs i, binned by M*

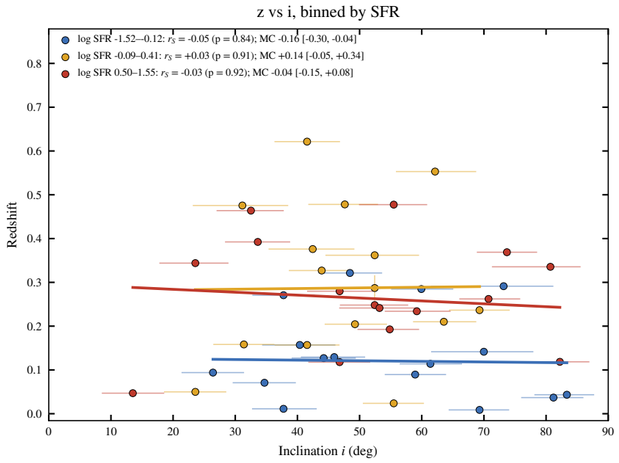

all 46: r_S = -0.12 (p = 0.42); partial r | log $M_\star$ = -0.08 (p = 0.36)
pooled within tertiles: r = -0.18 (p = 0.29); tertiles agree: p = 0.054
through the errors (MC median [16, 84]%): all -0.14 [-0.20, -0.08]; partial r -0.11 [-0.15, -0.07]

DM_host vs i, binned by M*

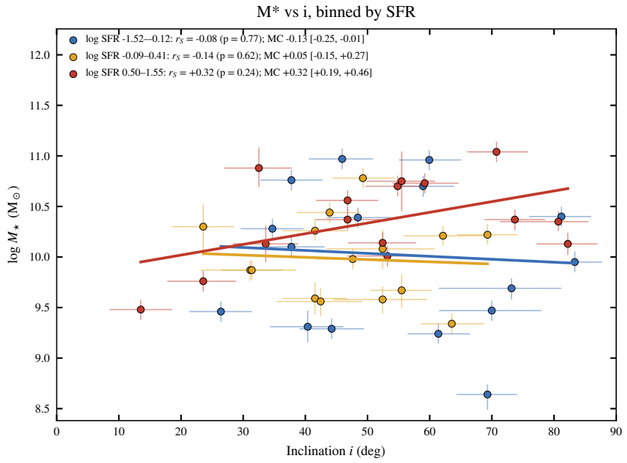

all 51: r_S = +0.12 (p = 0.39); partial r | log $M_\star$ = +0.09 (p = 0.38)
pooled within tertiles: r = +0.09 (p = 0.55); tertiles agree: p = 0.68
through the errors (MC median [16, 84]%): all +0.06 [-0.02, +0.15]; partial r +0.05 [-0.01, +0.10]

z vs i, binned by SFR

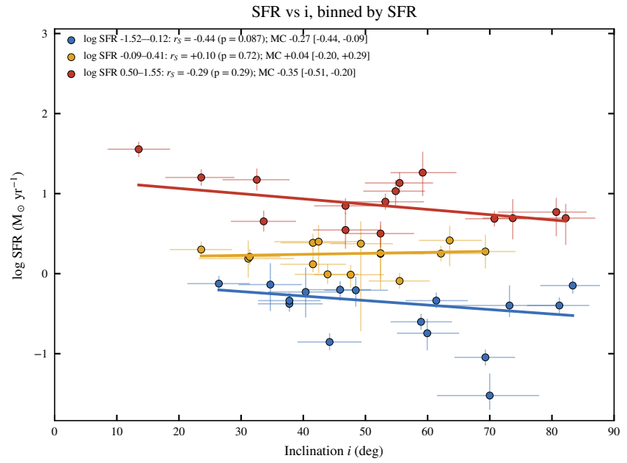

all 46: r_S = -0.07 (p = 0.65); partial r | log SFR = -0.03 (p = 0.75)
pooled within tertiles: r = -0.02 (p = 0.92); tertiles agree: p = 0.98
through the errors (MC median [16, 84]%): all -0.07 [-0.12, -0.03]; partial r -0.02 [-0.05, +0.01]

M* vs i, binned by SFR

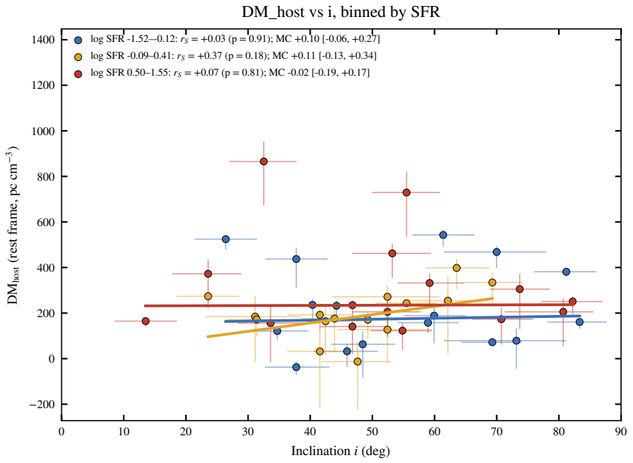

all 46: r_S = +0.10 (p = 0.52); partial r | log SFR = +0.09 (p = 0.38)
pooled within tertiles: r = +0.03 (p = 0.84); tertiles agree: p = 0.47
through the errors (MC median [16, 84]%): all +0.09 [+0.03, +0.15]; partial r +0.08 [+0.04, +0.12]

SFR vs i, binned by SFR

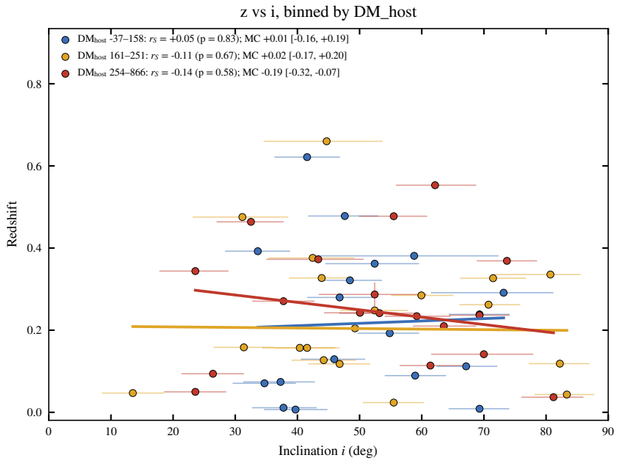

all 46: r_S = -0.12 (p = 0.42); partial r: binned on the y quantity
pooled within tertiles: r = -0.23 (p = 0.17); tertiles agree: p = 0.36
through the errors (MC median [16, 84]%): all -0.14 [-0.20, -0.08]

DM_host vs i, binned by SFR

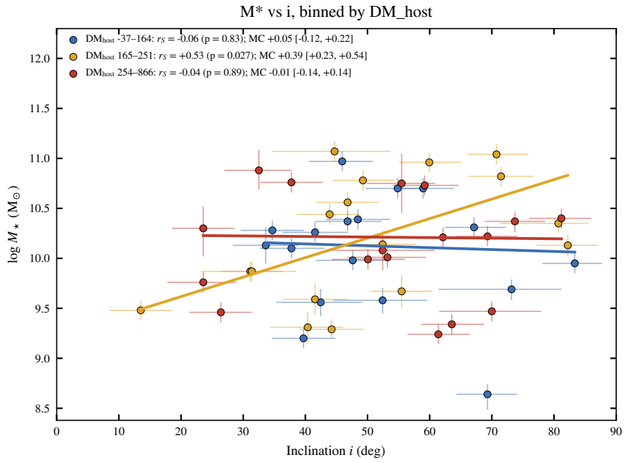

all 46: r_S = +0.12 (p = 0.42); partial r | log SFR = +0.10 (p = 0.28)
pooled within tertiles: r = +0.16 (p = 0.35); tertiles agree: p = 0.64
through the errors (MC median [16, 84]%): all +0.07 [-0.02, +0.16]; partial r +0.06 [-0.00, +0.12]

z vs i, binned by DM_host

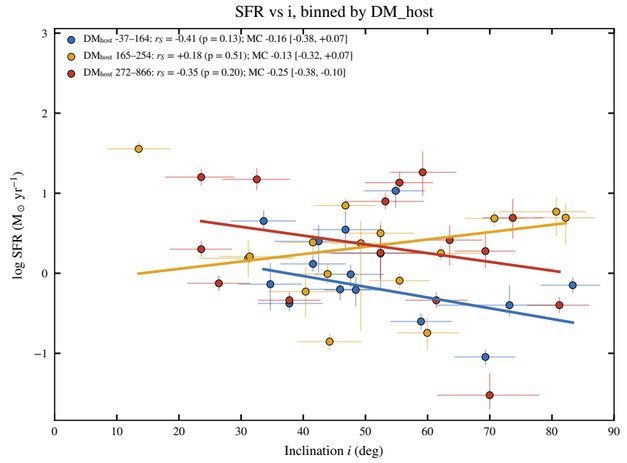

all 55: r_S = -0.02 (p = 0.86); partial r | DM_{host} = -0.02 (p = 0.86)
pooled within tertiles: r = -0.06 (p = 0.67); tertiles agree: p = 0.86
through the errors (MC median [16, 84]%): all -0.04 [-0.09, +0.01]; partial r -0.02 [-0.06, +0.01]

M* vs i, binned by DM_host

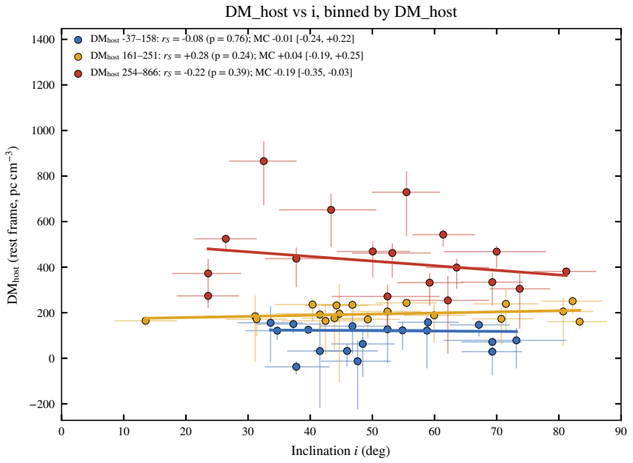

all 51: r_S = +0.14 (p = 0.31); partial r | DM_{host} = +0.10 (p = 0.27)
pooled within tertiles: r = +0.17 (p = 0.29); tertiles agree: p = 0.16
through the errors (MC median [16, 84]%): all +0.13 [+0.07, +0.19]; partial r +0.09 [+0.05, +0.13]

SFR vs i, binned by DM_host

all 46: r_S = -0.12 (p = 0.42); partial r | DM_{host} = -0.09 (p = 0.44)
pooled within tertiles: r = -0.19 (p = 0.25); tertiles agree: p = 0.26
through the errors (MC median [16, 84]%): all -0.14 [-0.20, -0.08]; partial r -0.10 [-0.15, -0.06]

DM_host vs i, binned by DM_host

all 55: r_S = +0.06 (p = 0.64); partial r: binned on the y quantity
pooled within tertiles: r = +0.00 (p = 0.98); tertiles agree: p = 0.36
through the errors (MC median [16, 84]%): all +0.02 [-0.06, +0.11]
